## NOTICE

All the students of diploma on (EE, ECE, ME & CE) branches of sessions 2018-21, 2017-20, 2016-19, 2015-18, 2014-17, 2013-16 are hereby informed that “**BHABHA ATOMIC RESEARCH CENTRE (BARC)**” is shortly going to do online/ offline /recruitment/ Apprenticeship/ placement program.

### **BHABHA ATOMIC RESEARCH CENTRE (BARC)**

The Bhabha Atomic Research Centre (BARC) is India's premier nuclear research facility, headquartered in Trombay, Mumbai, Maharashtra. BARC is a multi-disciplinary research centre with extensive infrastructure for advanced research and development covering the entire spectrum of nuclear science, engineering and related areas.

BARC's core mandate is to sustain peaceful applications of nuclear energy, primarily for power generation. It manages all facets of nuclear power generation, from the theoretical design of reactors to, computerized modeling and simulation, risk analysis, development and testing of new reactor fuel materials, etc. It also researches spent fuel processing and safe disposal of nuclear waste. Its other research focus areas are applications for isotopes in industries, medicine, agriculture, etc. BARC operates a number of research reactors across the country. The Government of India created the Atomic Energy Establishment, Trombay (AEET) with Homi J. Bhabha as the founding director on 3 January 1954. It was established to consolidate all the research and development activities for nuclear reactors and technology under the Atomic Energy Commission. All scientists and engineers engaged in the fields of reactor designing and development, instrumentation, metallurgy, and material science, etc., were transferred with their respective programs from the Tata Institute of Fundamental Research (TIFR) to AEET, with TIFR retaining its original focus for fundamental research in the sciences. After Homi Jehangir Bhabha's death in 1966, who is also known as the "Father of Indian Nuclear Programme", the centre was renamed as the Bhabha Atomic Research Centre on 22 January 1967.

The primary importance of BARC is as a research centre. The BARC and the Indian government has consistently maintained that the reactors are used for this purpose only: Apsara (1956; named by the then Prime Minister of India, Jawaharlal Nehru when he likened the blue Cerenkov radiation to the beauty of the Apsaras), CIRUS (1960; the "Canada-India Reactor" with assistance from the US), the now-defunct ZERLINA (1961; Zero Energy Reactor for Lattice Investigations and Neutron Assay), Purnima I (1972), Purnima II (1984), Dhruva (1985), Purnima III (1990), and KAMINI.

The plutonium used in India's 1974 Smiling Buddha nuclear test came from CIRUS. The 1974 test (and the 1998 tests that followed) gave Indian scientists the technological know-how and confidence not only to develop nuclear fuel for future reactors to be used in power generation and research but also the capacity to refine the same fuel into weapons-grade fuel to be used in the development of nuclear weapons.
